Sample Documentation for Inserting an Indwelling Urinary Catheter in a Male Patient

1930 C/O suprapubic pressure, bladder distended. Patient has not been able to void since returning from procedure at 1400. 18-Fr Foley catheter inserted without difficulty; 375 mL of clear, dark-yellow urine returned. Balloon inflated with 10 mL sterile solution. Catheter attached to bedside drainage bag. Denies discomfort or pain; states that suprapubic pressure has been relieved. —V. Hall, RN 2/28/13
