Sample documentation for Removing an Indwelling Urinary Catheter

1600 Indwelling urinary catheter removed without difficulty after deflating balloon. Instructed on need to increase fluids and measure first void. Informed that first void may be uncomfortable and is expected within 6 to 8 hours. Patient instructed to report signs and symptoms of UTI. —C. Murdoch, RN 3/26/13

1930 Voided 350 mL of clear, odorless, yellow urine without difficulty. Denies discomfort. —C. Murdoch, RN 3/26/13
