Equipment List for Inserting an Indwelling Urinary Catheter in a Male Patient

- Indwelling catheterization kit containing the following sterile items (catheter kits vary, so it is important to check the list of contents on the package):
  - Double-lumen catheter (some kits contain a catheter with attached drainage bag; others contain only a catheter, and some have no catheter)
  - Drapes (one fenestrated, with an opening in the center)
  - Lubricant
  - Cleansing solution incorporated into an applicator or to be added to cotton balls
  - Cotton balls
  - Forceps
  - Prefilled syringe containing sterile water for balloon inflation
  - Sterile drainage tubing with collection bag
  - Sterile gloves
  - Specimen container

- Sterile drainage tubing and bag (if not included in the kit)
- Device to secure catheter, such as a strap
- Extra sterile gloves and catheter (optional)
- Bath blanket
- Waterproof absorbent pad
- Clean gloves, basin with warm water, soap, washcloth, and towel
- Measuring container for urine
